DETAILED ACTION

Interference

Claim 11 of this application is asserted by applicant to correspond to claim(s) of U.S. Patent No. 6,094,483 granted to Fridrich et al.

The examiner does not consider this claim to be directed to the same invention as that of U.S. Patent No. 6,094,483 because Fridrich's use of a chaotic baker map to encrypt a message is patentable distinct over applicants use of a scrambling function to encrypt a message. Accordingly, an interference cannot be initiated based upon this claim.

Allowable Subject Matter

Claims 11-16 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to embedding a modified encrypted message into an information carrier signal. Each independent claim shows the message is hidden into the information carrier by the combination of the following three processes in the specific order: encryption using a scramble function, modulation/coding using predetermined data, and modification/scaling by a specific value. The closest prior art, Dennis (3,925,611) discloses a conventional scrambler-encoder for digital data, fails to anticipate the claimed invention.
